According to our (Global Info Research) latest study, the global Anchor Handling Tug Supply Vessels market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Anchor handling tug supply vessels are specially designed to handle anchors for oil rigs, tow ships to location, anchor ships and oil rigs, and serve as an emergency response and rescue vessel. The increasing number of offshore oil rigs is one of the primary factors driving the growth of this market globally. Oil rigs are offshore oil platforms that facilitate the drilling of wells for exploration and production activities. The increasing drilling of offshore oil and gas reserves will lead to a rise in the number of AHTS vessels. Moreover, the maturing onshore oil reserves in the North Sea and the Gulf of Mexico will also result in an augmented demand for AHTS vessels.

One of the emerging factors spurring the growth prospects for this market is the increasing adoption of LNG-fueled vessels. Since LNG is cost-effective, the market is showing a trend of using LNG-fueled AHTS vessels instead of diesel-fueled ships. LNG is a low-pressure gas and is well suited for AHTS vessels. The LNG-fueled AHTS vessels are also likely to reduce the costs involved in the operation of AHTS, thereby propelling this market's growth in the coming years.
