Abstracts

According to our (Global Info Research) latest study, the global Antimicrobial Catheters market size was valued at USD 1183.7 million in 2023 and is forecast to a readjusted size of USD 1863.7 million by 2030 with a CAGR of 6.7% during review period.

A catheter is a soft hollow tube, which is passed into the bladder to drain urine. Catheters are sometimes necessary for people, who for a variety of reasons, cannot empty their bladder in the usual way, i.e. passing urine into a toilet or urinal. This report mainly studies Antibiotic Coating Catheters and Silver Coating Catheters.

Antimicrobial catheters refer to catheters coated or infiltrated with antibacterial drugs, disinfectants, and metal-containing preparations. Anti-infective substances may coat the catheter, or attach to the catheter by chemical bonding. The anti-infection principle of the catheter is that when the catheter is exposed to blood, body fluids or other liquids, the anti-infective substance will be released around the catheter to form an anti-infective environment to resist microorganisms, thereby preventing the propagation and migration of bacteria colonizing the catheter.

Antimicrobial Catheters manufacturers include Teleflex, BD and Cardinal Health etc. The top 3 companies hold a share of nearly 70%. North America takes up the largest market, with a share of more than 50%, followed by Europe, with the share about 25%.
