## Abstracts

According to our (Global Info Research) latest study, the global Antimicrobial Coated Catheter market size was valued at USD 1183.7 million in 2023 and is forecast to a readjusted size of USD 1863.7 million by 2030 with a CAGR of 6.7% during review period.

Antimicrobial catheters refer to catheters coated or infiltrated with antibacterial drugs, disinfectants, and metal-containing preparations. Anti-infective substances may coat the catheter, or attach to the catheter by chemical bonding. The anti-infection principle of the catheter is that when the catheter is exposed to blood, body fluids or other liquids, the anti-infective substance will be released around the catheter to form an anti-infective environment to resist microorganisms, thereby preventing the propagation and migration of bacteria colonizing the catheter.

Medical Catheters are tubes that can inserted into a body cavity, vessel or duct, usually to allow for the administration of fluids, medications or gases or to drain fluids or urine from the body.

Global key players of Antimicrobial Coated Catheter include Teleflex, BD, etc. Global top 3 companies hold a share over 60%.
