Abstracts

Antimicrobial Susceptibility Test is used to determine the sensitivity of the drug in order to accurately and effectively treat the drug.

Scope of the Report:

This report focuses on the Antimicrobial Susceptibility Test in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. At present, the methods of drug susceptibility testing in clinical microbiology laboratories include paper diffusion method, dilution method (including agar and broth dilution method), antibiotic concentration gradient method (E-test method), and automated instruments.

Antibacterial drugs play a very important role in the control of bacterial infectious diseases. However, due to the unscientific and blind abuse of antibacterial drugs in the breeding process, many pathogenic bacteria have developed drug resistance, making antibacterial drugs resistant to bacterial diseases. The control effect is getting worse and worse, which not only causes waste of drugs, but also delays the disease and causes great economic losses to the farmers.

The worldwide market for Antimicrobial Susceptibility Test is expected to grow at a CAGR of roughly 6.3% over the next five years, will reach 3480 million US\$ in 2023, from 2410 million US\$ in 2017, according to a new GIR (Global Info Research) study.
