According to our (Global Info Research) latest study, the global Antimicrobial Susceptibility Tester market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Evolution in bacteria, viruses, fungus, and other microorganisms is a challenge for today's medical technology, since evolution in these living organisms is reducing the effect of traditional medicines. Fetal diseases and blood-borne diseases are spreading very fast due to environmental changes such as global warming and others. For controlling such diseases, research is being performed to find out effective medicines, antibiotics, and other immune boosters. For studying the reaction of organisms or group of organisms for antibiotics, antimicrobial susceptibility testers are used in hospitals, laboratories, and other research locations. Due to the changing nature of pathogens, bacteria, and other disease-spreading organisms, research activities are being carried out continuously, due to which, the demand for antimicrobial susceptibility testers is increasing from the past few years.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high

costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
