According to our (Global Info Research) latest study, the global Angiography Catheters market size was valued at USD 990.8 million in 2023 and is forecast to a readjusted size of USD 1305.5 million by 2030 with a CAGR of 4.0% during review period.

Angiography Catheter is designed for optimal performance and is offered in a broad range of curve selections. In catheter angiography, a thin plastic tube, called a catheter, is inserted into an artery through a small incision in the skin. Once the catheter is guided to the area being examined, a contrast material is injected through the tube and images are captured using a small dose of ionizing radiation (x-rays).

The global angiography catheters market is growing steadily and is likely to grow at a significant pace during the forecast period. This is due to the presence of many global and regional vendors that offer a wide range of angiography catheters. Also, it has been noted that the Tier-1 and Tier-2 companies dominate the market.
