Abstracts

The global Antioxidants market size is expected to reach \$ 14640 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Antioxidants are chemical substances that inhibit or slow down oxidation reactions in materials, food, or biological systems by scavenging free radicals, decomposing peroxides, or interrupting oxidative chain reactions. By reducing oxidative degradation, antioxidants help prevent deterioration, spoilage, or loss of performance. In industrial applications, antioxidants are widely used in plastics, rubber, lubricants, fuels, and coatings to improve thermal stability, oxidative resistance, and service life. In food and feed applications, they help extend shelf life and preserve flavor and nutritional quality, while in pharmaceuticals and health-related products they are used to mitigate oxidative stress.

The antioxidants market is primarily driven by expanding demand from downstream materials and consumer goods industries. Widespread use of plastics and rubber in automotive, construction, electronics, and packaging applications increases the need for improved aging resistance and material stability, supporting steady growth in industrial antioxidants. At the same time, rising focus on food safety and shelf-life management boosts demand for food-grade antioxidants. In addition, sustainability considerations and higher durability requirements are encouraging the development and adoption of high-efficiency, low-dosage, and environmentally friendly antioxidant solutions, while regulatory frameworks and product upgrading trends further underpin long-term market growth.

Asia-Pacific is the largest Antioxidants market with about 50% market share. North America is follower, accounting for about 21% market share. The key players are BASF,

SI Group, Songwon, Adeka, Everspring Chemical, Solvay, Rianlon, Clariant, Lanxess, DowDuPont, Jiyi Chemical, Sunny Wealth Chemicals etc. Top 3 companies occupied about 30% market share.
