Abstracts

The global Antipruritic Ointment market size is expected to reach \$ 4688 million by 2029, rising at a market growth of 4.4% CAGR during the forecast period (2023-2029).

The market for anti-itch ointments is expected to grow steadily in the coming years due to several factors. First, the incidence of skin conditions that cause itchiness is increasing worldwide, largely due to environmental factors such as pollution and climate change. Additionally, an aging population is expected to drive demand for anti-itch ointments, as older adults are more likely to develop skin conditions that cause itchiness.

An antipruritic ointment is a topical medication used to relieve itching (pruritus) of the skin. It works by reducing the sensation of itching and soothing the skin.
