Abstracts

The global Antiroll Tanks market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Antiroll tanks are tanks fitted onto ships in order to improve the tank's response to roll motion. Fitted with baffles intended to slow the rate of water transfer from the port side of the tank to the starboard side and the reverse, the tanks are designed such that a larger amount of water is trapped on the higher side of the vessel. This is intended to reduce the roll period of the hull by acting in opposition to the free surface effect. They can be broadly classified into active and passive antiroll tanks.

This report studies the global Antiroll Tanks production, demand, key manufacturers, and key regions.
