Antiserum, is a type of blood serum that contains specific antibodies against an antigen (foreign agent), such as an infective organism or poisonous substance. Antibodies in antiserum work by detecting and subsequently neutralizing antigens.

Antiserums are produced in animals, most commonly horses, sheep, oxen, and rabbits, and in humans, in response to infection, intoxication, or vaccination. Animal and human antiserums can be used in other individuals to confer immunity to a specific disease or to treat bites or stings of venomous animals.

Antiserum widely used in diagnostic virology laboratories. The most common use of antiserum in humans is as antitoxin or antivenom to treat envenomation.
