According to our (Global Info Research) latest study, the global Antistatic Agents market size was valued at USD 358.8 million in 2023 and is forecast to a readjusted size of USD 446.1 million by 2030 with a CAGR of 3.2% during review period.

Antistatic agents are used in polymers as additives to minimize the build-up static charge in various materials. The development of static charge on the surface of a material affects and minimizes the performance of the target material. Static charges can be diminished by either reducing the rate of generation or by expanding the rate of dissipation. Antistatic agents work on the increasing rate of charge dissipation. It draws moisture to the surface of the material; sometimes it is successful to dissipate the static charge regardless of the insufficient quantity of moisture that is required to wet the surface of the material.

Based on polymer type, the polypropylene segment is estimated to account for the largest share of the antistatic agents market in 2018.
