Abstracts

The global Antistatic Floor Mat market size is expected to reach \$ 3848 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Antistatic floor mats are functional protective materials used to control and release static electricity. They are typically made of conductive or static-dissipative materials and can safely conduct static electricity generated by people and equipment into the grounding system, preventing damage to electronic components and the working environment from electrostatic discharge. They are widely used in electronics and precision manufacturing environments.

Upstream applications mainly include raw materials such as PVC, rubber, conductive fillers (carbon black, carbon fiber), stabilizers, and additives. Downstream applications are concentrated in semiconductor and electronics manufacturing, SMT and assembly workshops, clean rooms, laboratories, data centers, and electronic repair and maintenance scenarios.

The global unit price of antistatic floor mats is \$10 per square meter, with annual sales of approximately 257.3 million square meters and a global annual production capacity of 280 million square meters. The industry profit margin is 25%.

This report studies the global Antistatic Floor Mat production, demand, key manufacturers, and key regions.
