Abstracts

The global Antiviral Immunoglobulin market size is expected to reach \$ 17924 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Antiviral immunoglobulin refers to a class of biological medicinal products containing specific antibodies used for the prevention (prophylaxis) or treatment of viral diseases, operating on the principle of passive immunization. In 2025, global antiviral immunoglobulin production reached approximately 1,731K Kg, with an average global market price of around USD 6,500 per Kg. A factory gross profit of USD 1,950 per Kg with 30% gross margin. A single line full machine capacity production is around 25K Kg per line per year. The upstream segment is highly dependent on the global human plasma supply chain. Downstream demand is concentrated in hospitals, emergency care and research and specialty clinics. A hepatitis B-positive liver transplant recipient receives HBIG therapy following transplantation to reduce the risk of viral recurrence and graft failure. China is leading due to aggressive expansion of plasma-derived biologics manufacturing, increasing healthcare expenditure, and growing domestic demand for immunotherapy products. While US follows due to advanced transplant medicine, high immunoglobulin utilization rates, strong reimbursement systems, and continuous expansion of plasma donation infrastructure.

This report studies the global Antiviral Immunoglobulin production, demand, key manufacturers, and key regions.
