Abstracts

According to our (Global Info Research) latest study, the global Antiviral Immunoglobulin market size was valued at US\$ 11581 million in 2025 and is forecast to a readjusted size of US\$ 17924 million by 2032 with a CAGR of 6.4% during review period.

Antiviral immunoglobulin refers to a class of biological medicinal products containing specific antibodies used for the prevention (prophylaxis) or treatment of viral diseases, operating on the principle of passive immunization. In 2025, global antiviral immunoglobulin production reached approximately 1,731K Kg, with an average global market price of around USD 6,500 per Kg. A factory gross profit of USD 1,950 per Kg with 30% gross margin. A single line full machine capacity production is around 25K Kg per line per year. The upstream segment is highly dependent on the global human plasma supply chain. Downstream demand is concentrated in hospitals, emergency care and research and specialty clinics. A hepatitis B-positive liver transplant recipient receives HBIG therapy following transplantation to reduce the risk of viral recurrence and graft failure. China is leading due to aggressive expansion of plasma-derived biologics manufacturing, increasing healthcare expenditure, and growing domestic demand for immunotherapy products. While US follows due to advanced transplant medicine, high immunoglobulin utilization rates, strong reimbursement systems, and continuous expansion of plasma donation infrastructure.
