The global Any-layer HDI PCB market size is expected to reach \$ 1758 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

Any-layer HDI PCB is an HDI board made using Anylayer interconnect technology. Anylayer technology, as the name suggests, is an advanced manufacturing technology that enables connections between any two layers in a multi-layer printed circuit board (PCB). This technology not only breaks through the limitations of traditional HDI (high-density interconnect) technology in interlayer connections, but also greatly improves the integration and performance of circuit boards. Anylayer HDI technology allows designers to freely layout circuits within a limited physical space according to actual needs, thereby achieving more complex and efficient circuit designs. In 2025, global Any-layer HDI PCB production reached approximately 3410 k units, with an average global market price of around 320 USD/unit. The production capacity for Any-layer HDI PCB in 2025 was approximately 5000 k units. The typical gross profit margin for Any-layer HDI PCB between 20% and 40%.

The Any-layer HDI PCB market is experiencing strong growth driven by increasing demand for miniaturized, high-performance electronics, especially in smartphones, 5G communication devices, AI computing servers, and IoT products. The market is characterized by advanced manufacturing technologies, high entry barriers, and a concentration of key suppliers in Asia, particularly in Taiwan, China, and South Korea. Rising adoption of high-speed data transfer, compact form factors, and multilayer designs continues to fuel the demand for any-layer HDI PCBs globally.

This report studies the global Any-layer HDI PCB production, demand, key manufacturers, and key regions.
