AOG (Aircraft on Ground) Service refers to urgent aviation support services provided when an aircraft cannot fly due to technical faults, missing parts, maintenance issues, or safety concerns. The service aims to restore aircraft airworthiness as quickly as possible and reduce flight delays, cancellations, and operational losses. It typically includes emergency parts supply, component exchange, line maintenance, troubleshooting, engineering support, logistics coordination, repair team dispatch, documentation support, and 24/7 technical response. AOG services are widely used by airlines, business jet operators, cargo carriers, maintenance organizations, leasing companies, and airport support networks. The industrial chain of AOG (Aircraft on Ground) Service includes upstream aircraft spare parts, consumables, tooling, ground support equipment, maintenance manuals, technical data, logistics networks, certified technicians, and repair capabilities. The midstream includes fault diagnosis, emergency response coordination, parts sourcing, warehouse dispatch, customs clearance, aircraft maintenance, engineering approval, quality control, and airworthiness documentation. Downstream applications include commercial airlines, cargo airlines, business aviation operators, regional carriers, aircraft leasing companies, airports, maintenance bases, and military or government aviation fleets. Related services include inventory management, component repair, exchange pools, mobile repair teams, technical hotlines, warranty support, and predictive maintenance programs.
