The global Aortic Aneurysm Clamp market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Aortic aneurysm clamp is a surgical instrument used to secure and occlude the aorta during complex cardiovascular procedures, particularly in cases involving the repair or treatment of an aortic aneurysm. It consists of two jaws or blades that are carefully positioned and closed around the aorta, temporarily blocking the blood flow through the affected portion of the vessel. The clamp is designed to provide a secure hold without causing damage to the delicate arterial walls. This allows the surgeon to safely work on the aortic aneurysm, perform repairs, and restore normal blood flow once the procedure is complete.
