Abstracts

The global API Generation Software market size is expected to reach \$ 648 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032). API generation software is a tool used to automatically create code and documentation for application programming interfaces (APIs). This kind of software usually generates API code and documents that comply with specific standards and specifications based on the information and requirements provided by users, thus simplifying the API design and development process.

The current API generation software market is trending towards an integrated workflow from code to documentation to testing and simulation. With the increasing prevalence of microservices, cloud-native technologies, and APIs as products, tools for generating, maintaining, and testing APIs are increasingly emphasizing end-to-end automation: from automatic import and reverse engineering of specifications such as OpenAPI/Swagger, to visual interface design, code snippets and client library generation, and automatic generation of test cases and documentation. Cloud/private deployments coexist, and enterprise-level needs focus on security, access control, version and change management, audit logs, and compliance. No-code/low-code API generation capabilities are lowering the barrier to entry and promoting cross-language and multi-protocol compatibility and consistency. Market competition is fierce, with vendors often enhancing their appeal through deep integration of development toolchains, robust documentation/sample capabilities, and high-quality client-side code generation.
