API Lifecycle Management refers to the systematic and standardized design, governance, and maintenance of Application Programming Interfaces (APIs) from planning to obsolescence. It encompasses core phases such as design and planning, development and testing, deployment and operation, and evolution and termination. Its core objective is to ensure the stability, security, scalability, and maintainability of APIs. Through effective version control, change management, and contract governance, it coordinates collaboration across different systems and teams, reduces integration risks, and maximizes the long-term business value of APIs.

The development of global API Lifecycle Management exhibits distinct regional characteristics. North America is a leader in concepts and technologies, possessing the most mature platforms, practices, and the largest market size, dominated by cloud service providers and specialized companies. Europe follows closely behind, driven by stringent data compliance (GDPR) and emphasizing security governance and standardization. The Asia-Pacific region is the most dynamic growth market, with Chinese enterprises rapidly adopting and promoting localized solutions due to their massive digitalization and system integration needs, becoming a significant force for innovation. The overall trend is that mature markets lead best practices, while emerging markets such as the Asia-Pacific region are becoming the main engines for large-scale application and scenario innovation.
