Apo Transferrin is the iron-free form of the protein transferrin, which is involved in iron transport and metabolism in the body. Transferrin is a glycoprotein found in the blood that plays a critical role in iron metabolism by binding and transporting iron ions (Fe^{3+}) throughout the body. It plays a critical role in maintaining iron homeostasis and is widely used in cell culture, research, and clinical diagnostics. Its ability to bind and transport iron makes it an essential protein in biological systems.
