Abstracts

The global Apoptotic Cell Enrichment Kit market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Apoptotic Cell Enrichment Kit Cell necrosis and apoptosis are two completely different cytological phenomena, and the two processes are very different in morphology. During cell necrosis, the cell membrane leaks, and the cell contents, including organelles and chromatin, are released outside the cell. In the process of cell apoptosis, at the initial stage, chromatin shrinks, separates, and distributes along the nuclear membrane, and the cytoplasm also shrinks, but the cell membrane remains intact and does not lose selective permeability; Unequal fragments, aggregated with certain organelles such as mitochondria, surrounded by reflexed cell membranes, and then gradually separated to form apoptotic bodies
