According to our (Global Info Research) latest study, the global Application Container market size was valued at USD 1264.5 million in 2023 and is forecast to a readjusted size of USD 5925.8 million by 2030 with a CAGR of 24.7% during review period.

The term 'application container,' which has several meanings in IT, has come to be used for a new type of technology that helps provide consistency and efficient design in the context of hardware virtualization.

North America is estimated to account for the largest market share in 2018. North America is one of the early users of the application container technology. The technological adoption in this region is high. Moreover, this region comprises a dense startup ecosystem, and all the leading cloud service providers are from this region. Trends, such as microservices and DevOps are already in high demand in this region creating a favorable environment for the growth of the application container market. However, Asia Pacific (APAC) is expected to grow at the highest CAGR during the forecast period. Companies in this region are transforming their core business applications, which makes them responsive to business changes. From the private to public sectors, all are embracing the application container technology. For instance, in Singapore, the government's digital services team at GoVTech has been using Nectar for building applications. Nectar stands for Next-generation Container Architecture and is a codename given to on-premises Platform-as-a-Service (PaaS). The emergence of DevOps is also expected to drive the growth of the application container market in this region.
