Abstracts

An application delivery controller (ADC) is a computer network device in a datacenter, often part of an application delivery network (ADN), that helps perform common tasks, such as those done by web sites to remove load from the web servers themselves. Many also provide load balancing. ADCs are often placed in the DMZ, between the outer firewall or router and a web farm.

According to our (Global Info Research) latest study, the global Application Delivery Controller (ADC) market size was valued at USD 3165.5 million in 2022 and is forecast to a readjusted size of USD 4079.4 million by 2029 with a CAGR of 3.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

North America application delivery controller market accounted for over 25% of the total revenue share in 2015, primarily owing to the well-established IT & telecom sector in the region. The U.S. held the major share in the revenue on account of the presence of a large number of enterprises relying upon the application delivery controllers for performance improvement as well as managing the network traffic. Furthermore, trends such as virtualization, increasing adoption of cloud and SDN devices, and network security are anticipated to positively impact the market growth over the forecast period.

This report is a detailed and comprehensive analysis for global Application Delivery Controller (ADC) market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
