Abstracts

An ADN provides application availability, security, visibility, and acceleration. It is a combination of WAN optimization controller (WOC), application delivery controller (ADC), application security equipment, and application gateway. An ADN monitors the web traffic and distributes traffic among all the servers. An ADN acts as a WOC, which reduces the number of bits over the network using caching and compression techniques. Some WOCs are installed on PCs or mobile clients, while others are installed in the data center.
