Abstracts

Application modernization is the refactoring, re-purposing or consolidation of legacy software programming to align it more closely with current business needs.

The goal of an application modernization project is to create new business value from existing applications. An application is a program designed to perform a specific function directly for the user or, in some cases, for another application program. Keeping legacy applications running smoothly can be a time-consuming, resource-intensive process, especially when the software becomes so outdated that it becomes incompatible with newer versions of the underlying operating system (OS) or system hardware.

This report studies the global Application Modernization and Application Transformation demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Application Modernization and Application Transformation, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2021 as the base year. This report explores demand trends and competition, as well as details the characteristics of Application Modernization and Application Transformation that contribute to its increasing demand across many markets.
