According to our latest research, the global Application Security Posture Management (ASPM) Software market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Application security posture management (ASPM) is a comprehensive cybersecurity solution that focuses on safeguarding software applications from potential threats. The process involves continuously assessing, monitoring, and enhancing an organization's application security posture. ASPM encompasses various technologies to identify and mitigate security risks in software applications. It helps companies with visibility, risk identification, and remediation recommendations. This software aids security teams, DevOps, and IT administration to manage compliance, prioritize risks, and handle vulnerabilities. Application security posture management (ASPM) solutions offer unique capabilities that distinguish them from other cybersecurity tools like security information and event management (SIEM) systems and vulnerability scanners. Unlike these tools, which identify, assess, and mitigate security risks, ASPM is specifically tailored to the security of software applications. It provides a holistic picture of application security health and integrates with the development lifecycle for proactive security measures.
