## Abstracts

According to our (Global Info Research) latest study, the global Application Server market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An application server is a modern form of platform middleware. It is system software that resides between the operating system (OS) on one side, the external resources (such as a database management system [DBMS], communications and Internet services) on another side and the users' applications on the third side. The function of the application server is to act as host (or container) for the user's business logic while facilitating access to and performance of the business application. The application server must perform despite the variable and competing traffic of client requests, hardware and software failures, the distributed nature of the larger-scale applications, and potential heterogeneity of data and processing resources required to fulfill the business requirements of the applications.

North America is expected to witness tremendous growth in the application server market and is projected to continue this trend over the forecast period, on account of technological advancement and early adoption.

The Global Info Research report includes an overview of the development of the Application Server industry chain, the market status of Cloud (Java-based, Microsoft Windows-based), Apps (Java-based, Microsoft Windows-based), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Application Server.
