Abstracts

According to our (Global Info Research) latest study, the global Applied AI in Autonomous Vehicles market size was valued at US$ 2067 million in 2025 and is forecast to a readjusted size of US$ 8171 million by 2032 with a CAGR of 21.9% during review period.

The practical application of artificial intelligence technology to allow self-driving capabilities and improve various elements of autonomous vehicle operation is referred to as applied AI in autonomous cars. This entails using AI algorithms, machine learning techniques, and powerful data processing to develop cars that can navigate, sense their surroundings, make judgments, and interact with their environments without the need for human interaction. To accurately detect the vehicle's surroundings, AI algorithms process data from sensors such as LiDAR, radar, cameras, and ultrasonic sensors. Sensor fusion techniques combine data from various sensors to provide a complete and trustworthy picture of the environment.

Autonomous vehicles, seen by many as the future of personal and public means of transport, are slowly gaining market share. In 2019, there were some 31 million cars with at least some level of automation in operation worldwide. In is expected that their number will surpass 54 million in 2024. Correspondingly, the global autonomous car market is projected to grow as well. AD could create massive value for the auto industry, generating hundreds of billions of dollars before the end of this decade, McKinsey research shows.
