According to our (Global Info Research) latest study, the global Aprepitant market size was valued at USD 77 million in 2023 and is forecast to a readjusted size of USD 99.1 million by 2030 with a CAGR of 3.6% during review period.

Aprepitant is an antiemetic chemical compound that belongs to a class of drugs called substance P antagonists (SPA). It mediates its effect by blocking the neurokinin 1 (NK1) receptor.

Aprepitant is a medication used for preventing nausea and vomiting caused by chemotherapy. The global market for aprepitant is primarily driven by several factors. The increasing incidence of cancer worldwide is a major driver for the aprepitant market. Chemotherapy is one of the primary treatment modalities for cancer, and nausea and vomiting are common side effects of chemotherapy. Aprepitant has been proven effective in preventing these side effects, making it a vital medication in managing the quality of life for cancer patients. The rising awareness among healthcare professionals and patients about the importance of supportive care in cancer treatment is contributing to the market growth. Improved education and understanding about the side effects of chemotherapy and the availability of medications like aprepitant have led to increased demand. The growing adoption of combination therapies in cancer treatment is driving the demand for aprepitant. Aprepitant is often used in combination with other antiemetic medications to provide a comprehensive approach in preventing chemotherapy-induced nausea and vomiting. The development of generic versions of aprepitant is also contributing to its market growth. Generic versions offer cost savings and improved accessibility for patients, leading to increased adoption. The expansion of healthcare infrastructure, especially in emerging markets, is playing a significant role in driving the global market for aprepitant. As more healthcare facilities and cancer

treatment centers are established, the demand for aprepitant is expected to rise. Ongoing research and development activities aimed at exploring new indications and formulations for aprepitant are further driving the market. For example, studies are being conducted to evaluate the efficacy of aprepitant in other conditions associated with nausea and vomiting, such as postoperative nausea and vomiting.
