Abstracts

The global Aprotinin market size is expected to reach \$ 267450 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Aprotinin, also known as bovine pancreatic Aprotinin inhibitor, BPTI (Trasylol, Bayer) is a protein that is used as medication administered by injection to reduce bleeding during complex surgery, such as heart and liver surgery. Its main effect is the slowing down of fibrinolysis, the process that leads to the breakdown of blood clots. The aim in its use is to decrease the need for blood transfusions during surgery, as well as end-organ damage due to hypotension (low blood pressure) as a result of marked blood loss.

Global Aprotinin key players include Sigma-Aldrich, BeiJing Geyuantianrun Bio-tech, Cayman Chemical, Taj Pharmaceuticals Limited, etc. Global top four manufacturers hold a share over 25%.

India is the largest market, with a share about 20%, followed by China, and North America, both have a share about 35 percent.

In terms of product, Aprotinin (From bovine lung) is the largest segment, with a share nearly 80%. And in terms of application, the largest application is Pharmaceuticals, followed by Scientific Research and Experiment.

This report studies the global Aprotinin production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Aprotinin and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering
