## Abstracts

The global Aptamer Optimization Service market size is expected to reach \$ 211 million by 2032, rising at a market growth of 10.9% CAGR during the forecast period (2026-2032).

Aptamer Optimization Service refers to a professional technical service that aims to improve the performance of existing aptamers?single-stranded nucleic acid molecules (DNA or RNA) with high specificity and affinity for target molecules?by modifying their sequence, structure, or chemical properties. This service addresses the limitations of primary aptamers obtained through systematic evolution of ligands by exponential enrichment (SELEX), such as low binding affinity, poor stability in complex biological environments, low specificity, or difficulty in practical application, and employs technologies including sequence truncation, point mutation, chemical modification (e.g., phosphorothioate modification, 2'-O-methylation), and structural rearrangement to enhance the aptamers? binding efficiency, stability, biocompatibility, and applicability. Provided by professional biotechnology companies or research institutions, the service is tailored to the specific needs of different fields, such as medical diagnosis, drug development, environmental detection, and food safety, and includes a complete process from performance evaluation of original aptamers, optimization scheme design, experimental verification, to final performance validation, ensuring that the optimized aptamers meet the practical application requirements of customers.

The demand for Aptamer Optimization Service is driven by the widespread application of aptamers in various fields, the increasing requirements for aptamer performance in practical scenarios, and the technical difficulties faced by many research institutions and enterprises in independent aptamer optimization. With the rapid development of biotechnology, aptamers have become important tools in medical diagnosis (e.g.,

biomarker detection), targeted drug delivery, environmental monitoring (e.g., harmful substance detection), and food safety testing, but primary aptamers often fail to meet the high standards of practical application due to their inherent defects. Many small and medium-sized enterprises, research laboratories, and academic institutions lack the professional technical team and advanced experimental equipment required for aptamer optimization, creating a strong demand for outsourced optimization services. The global market for Aptamer Optimization Service is expected to grow steadily, supported by the increasing investment in biotechnology research and development, the expansion of aptamer application scenarios, and the continuous advancement of aptamer modification technologies. Key business opportunities lie in providing customized optimization solutions for industry-specific needs (e.g., high-stability aptamers for in vivo diagnosis, high-specificity aptamers for environmental detection), developing efficient and cost-effective optimization technologies to shorten the service cycle, expanding cooperation with research institutions and pharmaceutical companies to establish long-term cooperative relationships, and exploring emerging application fields (e.g., synthetic biology, personalized medicine) to expand the service scope, thereby capturing the growing market share in the aptamer technology service field.
