## Abstracts

According to our (Global Info Research) latest study, the global Antibiotics market size was valued at USD 48 million in 2023 and is forecast to a readjusted size of USD 68 million by 2030 with a CAGR of 5.2% during review period.

Antibiotic also called an antibacterial, is a type of antimicrobial drug used in the treatment and prevention of bacterial infections. They may either kill or inhibit the growth of bacteria. A limited number of antibiotics also possess antiprotozoal activity. Antibiotics are not effective against viruses such as the common cold or influenza; drugs which inhibit viruses are termed antiviral drugs or antivirals rather than antibiotics.

More than 15.0% of the deaths, in children below the age of five, are estimated to be due to pneumonia and according to the statistics provided by the WHO about 9.2 million deaths were recorded in 2015. Similar to tuberculosis, the highest prevalence of the disease is identified to be in the South Asian and Sub-Saharan regions. Currently, the required antibiotic treatment is available only to one third of the infected population, thereby increasing the disease burden.

The Global Info Research report includes an overview of the development of the Antibiotics industry chain, the market status of Hospital (Cephalosporins, Penicillins), Clinics (Cephalosporins, Penicillins), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Antibiotics.
