Abstracts

According to our (Global Info Research) latest study, the global Aquaculture Net Cleaning Robots market size was valued at US$ 154 million in 2025 and is forecast to a readjusted size of US$ 267 million by 2032 with a CAGR of 7.8% during review period.

Aquaculture Net Cleaning Robots are specialized autonomous or remotely operated underwater vehicles (ROVs) designed to maintain the integrity and hygiene of fish farm enclosures. These robots utilize high-pressure water jets, mechanical brushes, or cavitation technology to automatically remove biofouling—such as algae, barnacles, and marine organisms—from the nets. By integrating advanced underwater propulsion, computer vision, and automated control systems, these robots replace hazardous manual diving operations. Their primary objective is to ensure optimal water exchange and dissolved oxygen levels within the pens, thereby reducing the risk of disease and preventing structural stress on the netting caused by excessive bio-load.

In 2025, the global production of Aquaculture Net Cleaning Robots reached 2,000 units, with a unit price of US$75,000 per unit and a gross margin of 35%.
