Aquaculture Oxygenation Control System is an intelligent water management system designed to automatically monitor and regulate dissolved oxygen levels in aquaculture environments. The system integrates oxygen sensors, controllers, aeration equipment, communication modules, and control software to optimize oxygen supply, improve aquatic animal survival rates, reduce energy consumption, and enhance farming efficiency. It is mainly applied in intensive aquaculture farms, recirculating aquaculture systems, ponds, and marine farming facilities. The product scope includes automated oxygen monitoring and control systems while excluding standalone aerators and manual oxygenation equipment.

The industry chain includes upstream suppliers of oxygen sensors, controllers, motors,

pumps, communication modules, electronic components, and software systems. Midstream covers system design, hardware integration, software development, assembly, calibration, and testing. Downstream applications include freshwater aquaculture, marine aquaculture, shrimp farming, fish farming, recirculating aquaculture systems, and smart agricultural facilities requiring automated water quality management.
