According to our (Global Info Research) latest study, the global Aquaculture Solar Aeration System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Aquaculture Solar Aeration System is a water aeration equipment driven by solar energy. In the aquaculture process, aeration is necessary to provide dissolved oxygen (DO) in the water body to maintain the normal life of fish and other aquatic organisms. The Solar Aeration System uses solar energy to generate electricity to drive aeration equipment.

Such systems usually include three main parts: solar panels, energy storage devices and aeration equipment. Solar panels convert solar energy into electrical energy and store it in energy storage devices to continue operation when solar power is not available. Aeration equipment uses this stored electrical energy to inject gas into the water through air pumps or jets, thereby increasing the dissolved oxygen content in the water.
