UV disinfection system is a sterilizing device for biologically charged water treatment, where the Ultra Violet radiation targets directly to microorganisms genetic material (DNA & RNA) destruction. The comparative advantage of the UV disinfection system over various chemical disinfection methods, is the unaffected physical and chemical composition of water after the UV radiation activity. The UV is effective against any type of microorganism such as algae, bacteria, virus, fungi, yeasts and ozone gas. UV devices are core filters to biologically charged water volume and it is commonly used to fresh and marine RAS farms and hatcheries.
