According to our (Global Info Research) latest study, the global Antibody Drug Conjugates (ADCs) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Antibody Drug Conjugates (ADCs) are monoclonal antibodies (mAbs) attached to biologically active drugs by chemical linkers with labile bonds. By combining the unique targeting of mAbs with the cancer-killing ability of cytotoxic drugs, ADCs allow sensitive discrimination between healthy and diseased tissue. ADCs are part of a specialized subset of highly potent APIs. This technically challenging type of therapy combines innovations from biotechnology and chemistry to form a new class of highly potent biopharmaceutical drugs.

Advances in coupling antibodies to cytotoxic drugs permit greater control of drug pharmacokinetics and significantly improve delivery to target tissue. Potent new anticancer drugs can now be used to target cancers while minimizing exposure of healthy tissue.
