Aquaculture Water Quality Online Analyzer is an instrument system used to continuously monitor key water parameters in ponds, tanks, recirculating aquaculture systems and offshore farming facilities. It may measure dissolved oxygen, pH, temperature, salinity, ammonia nitrogen, turbidity, conductivity and oxidation-reduction potential. The system supports real-time alarms, data transmission and automatic control of aeration or water treatment. The market includes online analyzers and monitoring units for aquaculture, but excludes handheld testers, laboratory analyzers and general environmental monitoring stations not designed for aquaculture use.

The industry chain includes electrochemical sensors, optical sensors, reagent modules, pumps, flow cells, control boards, communication modules, housings, calibration fluids

and cloud software. Midstream production includes sensor integration, fluidic design, calibration, waterproof assembly, data platform connection, reliability testing and field validation. Downstream demand comes from fish farms, shrimp farms, recirculating aquaculture systems, hatcheries, pond operators and smart aquaculture platforms. Growth is driven by intensive aquaculture, disease prevention, water quality risk control and digital farm management.
