## Abstracts

According to our (Global Info Research) latest study, the global Aquatic Product Processing Services market size was valued at US\$ 46858 million in 2025 and is forecast to a readjusted size of US\$ 51016 million by 2032 with a CAGR of 1.2% during review period.

Aquatic Product Processing Services refer to the industrial activities that systematically process aquatic biological resources such as fish, shellfish, crustaceans, and algae, whether caught or farmed, using physical, chemical, and biological methods, to produce safe, stable, and easily distributed products for consumption. Its core objectives are to extend shelf life, enhance edible value, ensure food safety, and maximize economic benefits. The processing scope is broad, ranging from basic cleaning, sorting, freezing, and refrigeration to advanced processing into fish paste, fish fillets, canned goods, dried products, seasonings, and the extraction of high-value-added products such as collagen and fish oil. This service is a crucial link between fishery production and end-consumer, strictly adhering to hygiene standards and quality control systems, and is committed to reducing losses, increasing product diversity, and enhancing the overall value of the industry.

As consumer demand for aquatic products increases, the demand for aquatic product processing services will naturally increase. Consumers' demands for aquatic products are not limited to freshness, but also include taste, nutritional value, safety, etc. This requires aquatic product processing services to provide more professional and refined processing. Different consumers have different needs for aquatic products. For example, some people may prefer marinated or smoked fish, while others may prefer fresh seafood. This diversified demand has promoted the development of aquatic

product processing services in the direction of customization to meet the individual needs of consumers.
