Abstracts

The global Aqueous Battery market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Aqueous batteries use concentrated brine solutions as electrolytes to facilitate the transfer of ions between electrodes and induce electrical current. Compared to non-aqueous batteries, aqueous batteries are not flammable and do not pose any significant risk of explosion due to the water-based nature of their electrolytes. They are also free of the toxic chemicals and environmental risks associated with their non-aqueous counterparts.

This report studies the global Aqueous Battery production, demand, key manufacturers, and key regions.
