According to our (Global Info Research) latest study, the global Aqueous Film Forming Foam (AFFF) market size was valued at USD 121.3 million in 2023 and is forecast to a readjusted size of USD 154.2 million by 2030 with a CAGR of 3.5% during review period.

Aqueous film forming foams (AFFF) is a film-forming foam fire extinguishing agent, which is mainly prepared from fluorosurfactant, foaming agent, etc. Fires of non-polar or hydrocarbon fuels are extinguished after mixing with water in a foam tank (foam proportioning mixing device) at a concentration of 1%, 3% or 6%. Can be used in combination with compatible dry powder fire extinguishing agents and can be used with most foamed foams in fire extinguishing processes. In the process of fire extinguishing, the water separated from the foam layer of the aqueous film-forming foam liquid can form a well-sealed water film on the surface of the fuel, which can isolate the contact between the fuel and the air. , High-efficiency oil fire fighting. It is characterized by low energy consumption, requiring only minimal stirring energy. The resulting foam has excellent fluidity and can quickly overwhelm flames to put out oil fires. Compatible with most proportioning units (foam tanks) and foam extinguishing units. Can be used in combination with compatible dry powder fire extinguishing agents. It is suitable for extinguishing Class A and B hydrocarbon fires, such as oil and fuel oil, gasoline, flammable materials, etc. It can also be used to extinguish large oil tank fires by means of 'submerged jet'. However, it is not applicable to the fire of polar solvents or water-soluble fuels, such as alcohols, esters, aldehydes, ethers, ketones and other flammable liquids.
