Abstracts

The global Aqueous Hydroxypropyl Dispersion market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Water-based hydroxypropylene dispersion is a base material for water-based coatings. It is composed of hydroxyl acrylic resin and water and has a self-emulsifying function. There are two types of aqueous hydroxypropyl dispersion: primary dispersion and secondary dispersion. Their differences mainly lie in the synthesis method, emulsifier, solvent, molecular weight, dryness and fullness. Water-based hydroxypropyl dispersion can be used with water-based isocyanate curing agents to produce water-based polyurethane coatings with excellent performance, which can be used in metal protection, wood coating, automotive electronics and other fields.

This report studies the global Aqueous Hydroxypropyl Dispersion production, demand, key manufacturers, and key regions.
