Abstracts

Geometric waveguides, also known as reflective or refractive waveguides, guide light through a series of reflections and refractions. They rely on the principles of total internal reflection (TIR) within a medium to confine and direct light. Typically, these waveguides consist of materials with a high refractive index, such as glass or polymers, and use prism-like structures or lenses to couple light in and out of the waveguide.

According to our (Global Info Research) latest study, the global AR Geometric Waveguide Module market size was valued at US$ 46.3 million in 2023 and is forecast to a readjusted size of USD 622 million by 2030 with a CAGR of 45.8% during review period.
