The AR HUD head-up display system is an advanced vehicle-mounted technology that combines augmented reality (AR) technology with traditional HUD (Head-Up Display) head-up display functions. Such systems superimpose computer-generated virtual information onto the driver's forward view, typically through the windshield. In this way, the driver can see important driving information, such as speed, navigation instructions, etc., without leaving the road's sight. The AR HUD system provides a larger field of view and a longer imaging distance, making the information display richer and more intuitive.
