Abstracts

Augmented reality (AR) is an enhanced, interactive version of a real-world environment, enabled holographically through digital visual elements, sound and other sensory stimuli. AR incorporates three features: the integration of the digital and real worlds, interaction in real time, and accurate 3D identification of virtual and real objects. Micro-LED display technology refers to a display technology that uses self-luminous micron-scale LEDs as light-emitting pixel units and assembles them on the drive panel to form a high-density LED array. At present, micro LED is considered to be the best solution for AR device display.
