Abstracts

According to our (Global Info Research) latest study, the global Aramid Braided Products market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Aramid Fiber is man-made high-performance fiber, with molecules that are characterized by relatively rigid polymer chains. These molecules are linked by strong hydrogen bonds that transfer mechanical stress very efficiently, making it possible to use chains of relatively low molecular weight. Aramid fibers are a class of heat-resistant and strong synthetic fibers. They are used in aerospace and military applications, for ballistic-rated body armor fabric and ballistic composites, in bicycle tires, and as an asbestos substitute. The name is a portmanteau of 'aromatic polyamide'. They are fibers in which the chain molecules are highly oriented along the fiber axis, so the strength of the chemical bond can be exploited.

Global Aramid Fiber (Para and Meta) market is projected to reach US\$ 4302.1 million in 2029, increasing from US\$ 2339 million in 2022, with the CAGR of 5.0% during the period of 2023 to 2029.

Demand from Flame Retardant Protection and Automotive are the major drivers for the industry.

North America is the largest producer of aramid fiber (para and meta), holds a share over 44%, followed by Japan, Europe, and China.
