Abstracts

Aramid fiber mica paper is a high-performance composite insulation material that combines the excellent mechanical properties of aramid fiber with the excellent electrical properties of mica. This material maintains the good electrical properties and high temperature resistance of natural mica, while also having excellent corona resistance, cut-through resistance, permeability and air permeability. It can be impregnated and pressed with epoxy resin, silicone resin, etc. to form high-quality plate-shaped temperature-resistant insulating materials. It can also be impregnated with glass fiber cloth, film, ceramic fiber, etc. and compounded with epoxy or silicone resin to form high-quality rolls. or strips of high temperature resistant insulating material. Although aramid fiber itself has worse corona resistance than mica, its extremely high strength, modulus, toughness, as well as excellent insulation properties and high temperature resistance make aramid/mica insulation materials useful in improving corona resistance and insulation. Performance wise it's great. Aramid mica paper utilizes the respective advantages of aramid fiber and mica materials and is prepared through modern papermaking technology combined with composite material processing methods. It simplifies the dipping and reinforcing steps of the traditional mica paper process and meets the needs of the development of modern mica insulation materials. Require.
