Abstracts

The global Aramid Paper Honeycomb market size is expected to reach \$ 913 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032). Aramid paper honeycomb is a honeycomb core material made from polyisophthalamide (aramid) paper. It is used to manufacture high-quality, high-performance sandwich structures. Aramid paper honeycomb cores are lightweight, have high specific strength and specific stiffness, are pressure-resistant, shear-resistant, fatigue-resistant, corrosion-resistant, and have excellent environmental adaptability. It possesses self-extinguishing properties, elasticity, insulation, electromagnetic wave transmission capability, and vibration absorption. It also provides good insulation against water, sound, electricity, and heat.

Aramid paper thicknesses are available in 0.038, 0.05, 0.078, 0.10, and 0.125 mm; the cell shapes include regular hexagons, S-shapes, rectangles, and dumbbell shapes, with regular hexagons being the most common. The unit size of the aramid paper honeycomb core is expressed by the unit side length and the diameter of the inscribed circle; different impregnating resins are selected according to application requirements, commonly including phenolic resins, modified epoxy phenolic resins, and polyimide resins.

Combining aramid paper with honeycomb structures can create composite materials that are lightweight and high-strength. Aramid paper honeycomb sandwich structures are widely used in aviation, aerospace, shipbuilding, automotive, railway, construction, and telecommunications industries, for example, in the manufacture of aircraft radomes, fairings, horizontal stabilizers, ailerons, flaps, cargo holds, cabin floors, exterior wall panels, and partitions. They can reduce the structural weight of components.

According to the type of aramid paper, aramid paper honeycomb can be divided into meta-aramid paper honeycomb core materials and para-aramid paper honeycomb core materials.

The unit of this article is based on the side length of 1.83, which is converted from a standard block of 48Kg/m³. If you need to change the unit, multiply it by the density.

In 2025, global Aramid Paper Honeycomb sales reached approximately 136,424 CBM, with an average global market price of around 4,530 US\$/CBM. Production capacity reached 150,000 CBM, with a gross profit margin of approximately 40%.

In the automotive, aerospace, and other fields, lightweighting is an ongoing trend. Aramid paper honeycomb, with its low density and high strength, helps reduce structural weight and improves fuel efficiency and performance, thus benefiting from this trend. With continuous advancements in engineering technology, the requirements for material performance are constantly increasing. Aramid paper honeycomb, as a material with excellent high-temperature resistance, corrosion resistance, and high strength, can meet the high-performance material needs of various engineering fields, such as aerospace, automotive, and shipbuilding. The application areas of aramid paper honeycomb are constantly expanding, extending beyond traditional aerospace and automotive industries to emerging fields such as new energy vehicles, intelligent manufacturing, and electronic equipment. This broad expansion of applications provides new growth points for the industry.
