Arbidol Hydrochloride as known as Arbidol, is an antiviral treatment for influenza infection.

According to our (Global Info Research) latest study, the global Arbidol Tablets (COVID-19) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In February 2020, Li Lanjuan, an expert of the National Health Commission of China, proposed using Arbidol (umifenovir) together with darunavir as a potential treatment during the 2019–20 coronavirus outbreak. Chinese experts claim that preliminary tests had shown that arbidol and darunavir could inhibit replication of the virus. However, later studies showed that it did not show any efficacy in treating the Covid-19 disease. However usage by itself as a post-exposure prophylaxis (PEP) of Covid-19 transmission has been demonstrating positive results though further research is still warranted.
