Abstracts

Arc extinguishing substations are key facilities used in power systems to quickly cut off the current and extinguish arcs in the event of system failure or short circuit to prevent equipment damage, fire or personnel injury. They usually include equipment such as arc extinguishing switches, circuit breakers, capacitors and reactors, as well as corresponding control systems and safety protection devices. In the event of a fault, the arc-extinguishing substation can quickly disconnect the circuit and cut off the arc to ensure the safe operation of the power grid. These sites are often located at important nodes in the electric power transmission and distribution system, such as power plants, substations and large industrial power sites.

According to our (Global Info Research) latest study, the global Arc Extinguishing Substation market size was valued at US\$ 2975 million in 2023 and is forecast to a readjusted size of USD 4150 million by 2030 with a CAGR of 4.9% during review period.

As global energy demand continues to grow, the development of the power industry is increasingly important. Especially in emerging economies and in the process of industrialization, electricity demand shows a rapid growth trend. This provides broad space for the development of the arc-extinguishing substation market. In addition, the development of smart grids and renewable energy has also brought new opportunities to the arc-extinguishing substation market. The construction of smart grid requires a large amount of power equipment and technical support, and as an important part of it, the market demand for arc extinguishing substations will also grow. At the same time, the rapid development of renewable energy has also promoted the growth of the arc extinguishing substation market. The instability of renewable energy puts higher requirements on the stability of the power system, and the application of arc-

extinguishing substations can effectively improve the anti-interference ability and stability of the power system. Overall, the arc-extinguishing substation market shows a positive development trend. The market is expected to continue its growth momentum, driven by rising power demand and technological advancements.
